# SWAN SYSTEMS

## Your partner in water & nutrient management

Do you want to know how much and when to irrigate? Is it important to track your annual water use compared to your budget?

### **SWAN SYSTEMS:**

- Is hardware independent
- Manages daily irrigation
- Manages annual water use
- Monitors remotely via satellite imagery
- Manages nutrients
- Includes customer support

## About SWAN Systems

SWAN Systems is the premier software platform enabling growers to visualize farming operations from the “driver’s seat” to improve **yield, save time and money, and maximize the utility of resources - all from one platform**. Tailored to local geography and irrigation context, SWAN transforms historical, current, and predictive data from multiple sources into **actionable insights**.

Regardless of the age of your orchard, SWAN Systems can help you to improve fruit size and quality, optimize resources, lower your input costs, and improve stakeholder satisfaction.

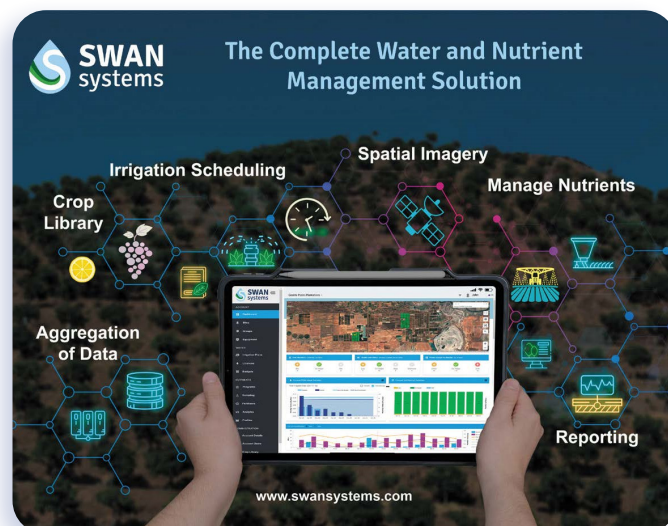

SWAN’s ability to integrate data from multiple sources across irrigation operations provides the detail for informed decision-making. No more jumping from app to app to make a business decision that can affect your bottom line. SWAN delivers value to growers and is paramount in ensuring that your business will be there for the next generation.

### Benefits of SWAN Systems:

- Use your existing irrigation hardware, soil moisture probes, weather stations and more
- Site specific data serves as building blocks for irrigation and management decisions
- System suggested irrigation schedules for when to irrigate and how much
- Manage water allocations and irrigation infrastructure constraints
- Satellite imagery to identify crop stress/ disease and in-field leaks or blockages
- Reporting provides users with updates on water use, soil moisture status, and fertiliser application history
- Maximise efficiency on water and fertiliser use per ton of fruit produced
- Increase gross margins across all blocks
- Management have confidence that evidence-based decisions for irrigation and water management are made.
